

The RGR085 “Striated Star” pattern was written and shows diagrams using the Large Kaleido-Ruler by Marti Mitchell. If you are using the Large Kaleido-Ruler simply follow the patterns diagrams. NO CHANGES ARE NEEDED.

To all quilters attempting to piece my Striated Star Quilt using the 45° Diamond Dimensions ruler from Creative Grids (hereafter called CGREU2) please accept my sincere apologies for the frustrations caused by the differences in this ruler, as well as let me express my thanks for those of you at the retreat for helping devise a solution.

However you are using the CGREU2 you will need the following instructions to adjust it:

The Large Kaleido-Ruler marks its inch measurements along the length of diamond, and my pattern showed aligning fabric with the “blunted” upper corner of this ruler.

While the CGREU2 measured inches along the outside edges of the diamond and cuts the fabric to a longer point as it did not have the “blunted” corner discussed above.

On the last page of the Striated Star Pattern is a paper template of the area used by the Large Kaleido-Ruler.

Place this paper template on the 60° pointed end of the CGREU2 ruler.

Use masking tape to mark the “blunted” corner at the top of the paper template on the ruler (approx. 3/8” from the point). Place an arrow on the masking tape to indicate which side of the tape aligns with the paper template.

Since you can't cut across the pointed corner of this ruler to “blunt cut” the points, once you have drawn your 1/4” intersection “X’s” simply place a small ruler at 1/4” on top the intersection and trim off the point to be 1/4” beyond the center of the “X”.

When the pattern refers to using the 7 1/2” mark, that measurement is way too large for the fabric. Again use masking tape to mark the location of the bottom edge of the paper template across the center of the ruler. Place arrows on the masking tape to indicate which side of the tape aligns with the paper template.

The final place that the CGREU2 ruler will differ is when trimming off the excess stripes to form the final diamonds.

Place your untrimmed diamond as shown.

Place the CGREU2 on the untrimmed diamond aligning the "blunted" corner on the left and keeping the center line across the diamond on the center seam.

Note: The bottom right corner of the untrimmed diamond sticks out beyond the ruler by about a half inch. Likewise, the point at the right extends beyond the ruler too.

Trim the upper left excess stripes off as shown.

Trimming the bottom left stripes excess gets a little trickier as the ruler does not extend far enough to trim along its edge. SO:

- 1) DO NOT MOVE the CGREU2 ruler.
- 2) Butt a smaller straight ruler along the bottom left edge of the CGREU2 as shown.
- 3) Gently remove the CGREU2.
- 4) Trim the excess stripes along the upper edge of the small straight ruler (as indicated by the arrows)
